Blackwell's Neurology and Psychiatry Access Series: Adult Psychiatry provides a practical discussion of psychopathology and aids the non-psychiatrist in recognizing psychiatric symptoms and syndromes and understanding the principles of management strategies. The book is divided into three main sections: Section 1 covers the assessment and evaluation of psychiatric disorders; Section 2 considers important aspects of psychopathology; Section 3 explores important topics in clinical medicine including the interface between psychiatry and primary care, general psychiatric treatment, practical genetics, age-related considerations, suicide, medicolegal issues, and ethics. I chose psychiatry because of inpatient rotation at Harborview. I was impressed with the diversity of patients and the acuity of their presentations. When looking at various programs, the University of Washington consistently stood out to me. Not only because is it a top program in research, primary care and collaborate care, but because it is in heart of a beautiful city with access to outdoors, great food and a variety of festivities. I love running around Green Lake, enjoying new restaurants, checking out street fairs and dancing around block parties.
