It is a practical teaching and identification guide, as well as, a useful reference work to the world's flowering plants. The book is based on the current family system and collates current (up to Oct 2014) generic circumscriptions based on molecular data, useful order keys and over 3000 images. Flowers are needed for flowering plant identification though when there are only fruits present it is still possible but becomes more difficult. In most cases a combination of vegetative and reproductive parts are needed and in some cases a combination of both floral and fruit characters. The Dilleniaceae are the other unplaced family and are characterised Save. Cite this Item. See more ideas about plants, planting flowers, house plants.
