Get A Copy. Over three decades of research into this disease have been undertaken by several research groups in Australia, including work by our original research group in Western Australia which was involved in the discovery and sequencing of the amyloid-Î² peptide (also known as AÎ² or A4 peptide) extracted from cerebral amyloid plaques. This review discusses the journey from the discovery of the AÎ² peptide in Alzheimer's disease (AD) brain to the establishment of pre-clinical AD using PET amyloid tracers, a method now serving as the gold standard for developing peripheral diagnostic approaches in the blo
