Diet therapy is a therapeutic method consisting in the treatment of various diseases with a special diet; the same as medical nutrition. Diet therapy is the use of nutrition for the treatment of various diseases. The influence of clinical nutrition is determined by the qualitative and quantitative composition of food (proteins, fats, carbohydrates, vitamins, minerals, microelements, etc.), its calorific value, physical properties (volume, temperature, texture), diet (eating hours, food distribution during days, the frequency of receptions), the therapeutic effect of individual products. Medical nutrition is prescribed in the form of special diets (therapeutic diets / tables), taking into account the pathogenesis of the disease, the characteristics of the course of the main and associated diseases in a Krause's Food & Nutrition Therapy. 1370 Pages · 2007 · 187.9 MB · 8,828 Downloads · English. clinical nutrition. of Foods, Nutrition and Diet Therapy, 5th Edition Fundamentals of Foods, Nutrition a Encyclopedia of Foods. Crohn's disease and ulcerative colitis represent a special challenge for both the patient concerned with the choice of foods and for the practitioners of nutrition therapy seeking how to best advise them. Typical symptoms, such as digestive complaints, stool irregularities, diar-rhea, abdominal pain, nausea and weight loss, have often been blamed on dietary factors, since they often occur after eating. As a result, both patients and their families are uncertain what they should eat and drink in order to both avoid an increase in symptoms and pre-vent nutritional deficiencies. A poor nutritiona...
