This course in Information Systems enables the learner to explore the system's components, explain elements in the study of Information Systems, identify what a business process is and explain the features of quality information. The course will be of interest to business professionals who would like to gain a basic knowledge and understanding of Information Systems. Start Course Now.

Modules. Module 1: What is an Information System? What is an Information System? Introduction to information systems T. Cornford, M. Shaikh IS1060 2013 Undergraduate study in Economics, Management, Finance and the Social Sciences This is an extract from a subject guide for an undergraduate course offered as part of the University of London International Programmes in Economics, Management, Finance and the Social Sciences. Materials for these programmes are developed by academics at the London School of Economics and Political Science (LSE). For more information, see: [www.londoninternational.ac.uk](http://www.londoninternational.ac.uk) This guide was prepared for the University of London International Programmes Introduction. If you are reading this, you are most likely taking a course in information systems, but do you even know what the course is going to cover? When you tell your friends or your family that you are taking a course in information systems, can you explain what it is about? For the past several years, I have taught an Introduction to Information Systems course. The first day of class I ask my students to tell me what they think an information system is. I generally get answers such as "computers," "databases," or "Excel." These are good answers, but definitely incomplete ones.
