Searching photos, artwork, books, blueprints, published and unpublished articles, dissertations, memoirs and other materials and documents on the history of rocketry and space exploration from any country and any time period. Contact Anatoly Zak. Picture of the day. Russia's space industry comprises more than 100 companies and employs 250,000 people. Most of the companies are descendants of Soviet design bureaux and state production companies. The industry entered a deep crisis following the dissolution of the Soviet Union, with its fullest effect occurring in the last years of the 1990s. Funding of the space program declined by 80% and the industry lost a large part of its work force before recovery began in the early 2000s. Many companies survived by creating Russia and India will soon determine which Russian. Russian cosmonaut Ivan Vagner currently on space m. Khrunichev Centre is going to resume the productio. Load More... On days off from working to expand the Russian habitat at the International Space Station, the cosmonauts will do their usual job "implement the scientific program. Naturally, this time" full story. Space exploration has since become a model of international cooperation, where countries including Russia and the US share information and coordinate projects together. It is, however, still a source of great pride to Russia and a field in which Russia excels. Brief History of the Space Race. Sputnik, which literally means "satellite" in Russian, was the first man-made object to orbit earth and arguably the beginning of the space race. Russia will be able to claim leadership positions in the field of civil space exploration if the country switches to the new rocket and space technology of the Angara rocket family in the coming years. In addition, Russia also needs to develop a new manned spacecraft, the head of Roscosmos Dmitry Rogozin believes. According to Rogozin, this would open up "great technological opportunities in space" for Russia. To achieve it, one needs to do the following: to make a technological breakthrough
