More recent trends in household income suggest that the effects of the Great Recession may finally be in the past. From 2015 to 2018, the median U.S. household income increased from \$70,200 to \$74,600, at an annual average rate of 2.1%. This is substantially greater than the average rate of growth from 1970 to 2000 and more in line with the economic expansion in the 1980s and the dot-com bubble era of the late 1990s. Housing prices more than doubled in this period, and stock values tripled.<sup>11</sup> As a result, the median net worth of American families climbed from \$94,700 in 1995 to \$146,600 in 2007, a gain of 55%.<sup>12</sup> (Figures are expressed in 2018 dollars.) But the run up in housing prices proved to be a bubble that burst in 2006. Hooray! You've discovered a title that's missing from our library. Can you help donate a copy? Recent trends in American housing. by Edith Elmer Wood. 0 Ratings. New trends in the construction of wooden houses. Wood is still one of the most popular materials for the construction of residential buildings. Stone, brick, foam blocks, of course, are widely used in construction, but the tree has not lost its relevance and popularity for many centuries. In recent years, the demand for multi-storey estates and grandiose mansions has been gradually but steadily declining. Even the owners of the plots, not sparing financial means for building a house from a tree, prefer to order projects of one- or maximum two-story structures.
