

# Simulation of Semiconductor Processes and Devices 2004: Sispad 2004 9783211224687 Springer Science & Business Media, 2004 2004 374 pages Gerhard Wachutka

Start by marking "Simulation of Semiconductor Processes and Devices 2004" as Want to Read: Want to Read savingâ€¦ Want to Read. This volume contains the proceedings of the 10th edition of the International Conference on Simulation of Semiconductor Processes and Devices (SISPAD 2004), held in Munich, Germany, on September 2-4, 2004. The conference program included 7 invited plenary lectures and 82 contributed papers for oral or poster presentation, which were carefully selected out of a total of 151. This volume contains the proceedings of the 10th edition of the International Conference on Simulation of Semiconductor Processes and Devices (SISPAD 2004), held in Munich, Germany, on September 2-4, 2004. Springer Vienna, 2004. 387 p. ISBN 978-3-7091-7212-4. This volume contains the proceedings of the 10th edition of the International Conference on Simulation of Semiconductor Processes and Devices (SISPAD 2004), held in Munich, Germany, on September 2-4, 2004. The conference program included 7 invited plenary lectures and 82 contributed papers for oral or poster presentation, which were carefully selected out of a total of 151 abstracts submitted from 14 countries around the world. Like the previous meetings, SISPAD 2004 provided a world-wide forum for the presentation and discussion of results from book Simulation of semiconductor processes and devices 2004, SISPAD 2004. Proceedings of the 10th international conference on simulation of semiconductor processes and devices, Munich, Germany, September 2-4, 2004. With CD-ROM (pp.295-298). Accurate Modeling of Lattice Site-Dependent Ionization Level of Impurities in  $\text{SiC}$  Devices. Chapter 1. January 2004 with 6 Reads. A general algorithm for analysis of semiconductors with arbitrary models for heavy doping phenomena is presented. Different models, theoretical as well as empirical, were applied, and minority carrier concentration in the uncompensated n-type silicon was analyzed. Recalculated into the term of apparent BGN, the results were compared with experimental data.
