History 891: Proseminar in Modern European History

This course focuses on key themes and recent scholarship in twentieth century European history. We will examine classic problems (such as the Great War) as well as more recent historiographical approaches.

Requirements: Two short (5-7 pages) review essays and one long paper (15-20 pages) on a topic to be agreed upon with the instructor. If possible one of your review essays should assess a foreign language book. Longer papers should be in a field/country outside your specialty (i.e., if your specialty is modern Italy you will be urged to write about another country or to write a comparative essay). Students will also be responsible for leading two or more discussions. Attendance is essential.

Starred books can be purchased at the bookstore of your choice. All books are on 3 hour reserve in Helen C. White Library. Articles are available online via the UW Library.

To get a better understanding of the background and contents of the Epistle to the Hebrews. 2. To understand the purpose and theology of the Epistle. 3. To develop the necessary tools for the correct interpretation of the Epistle and to be able to preach and/or teach from the Epistle. Presentation on theme: "EKC 337/3 REACTOR DESIGN AND ANALYSIS (Semester II 2009/2010) SCHOOL OF CHEMICAL ENGINEERING, UNIVERSITI SAINS MALAYSIA EKC 337/3 REACTOR DESIGN AND ANALYSIS" Presentation transcript molecules reacting per active site per second at the condition of the experiment ~When a metal catalyst e.g. Pt is deposited on a support, the metal atoms are considered active sites ~The dispersion (D) of the catalyst is the fraction of the metal atoms deposited that are on the surface Adsorption of ethylene on Pt to form chemisorbed ethylidyne SCHOOL OF CHEMICAL ENGINEERING SEMESTER II EXAMINATION 2009/2010. MAPH 40540 Synoptic Meteorology II. Extern examiner: Professor Keith Shine Head of School: Professor Michael Searcoid. Lecturer: Professor Peter Lynch. Assume that the temperature field is advected passively by the flow. Consider two cases: (i) Isotherms oriented at 20° to the x-axis; (ii) Isotherms oriented at 70° to the x-axis. In each case, how will the temperature field evolve in time? You may use the 2D-Frontogenesis function.
